main()

Start
Input: filePath
imageArray = load_img(filePath)
Scale: (imageArray * 255) as uint8
target = (100, 100)
orig_h, orig_w = imageArray.shape
orig_ar = orig_w / orig_h
target_ar = 100 / 100
orig_ar >= target_ar?
Yes
No
new_size = (int(100 / orig_ar), 100)
new_size = (100, int(100 / orig_ar))
imageArray = resize_image(imageArray, new_size)
imageArray = pad_image(imageArray, (100, 100))
Input: pixel coordinates (x, y)
Print RGB values at (x, y)
Print "Converting <filePath> to HSV..."
imageArray = convert_to_hsv(imageArray)
Print HSV values at (x, y)
Display HSV image
End

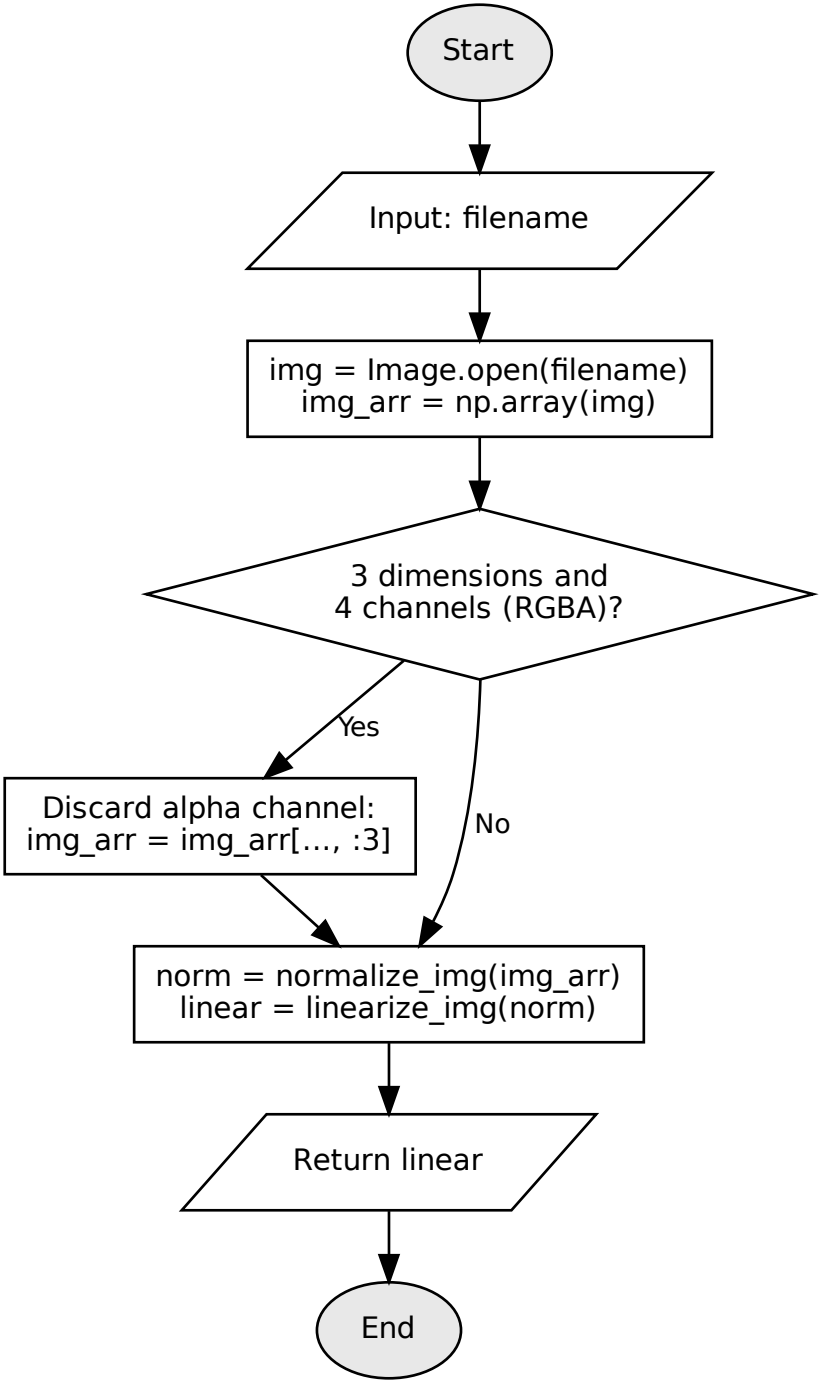

rgb_to_hsv(R, G, B)

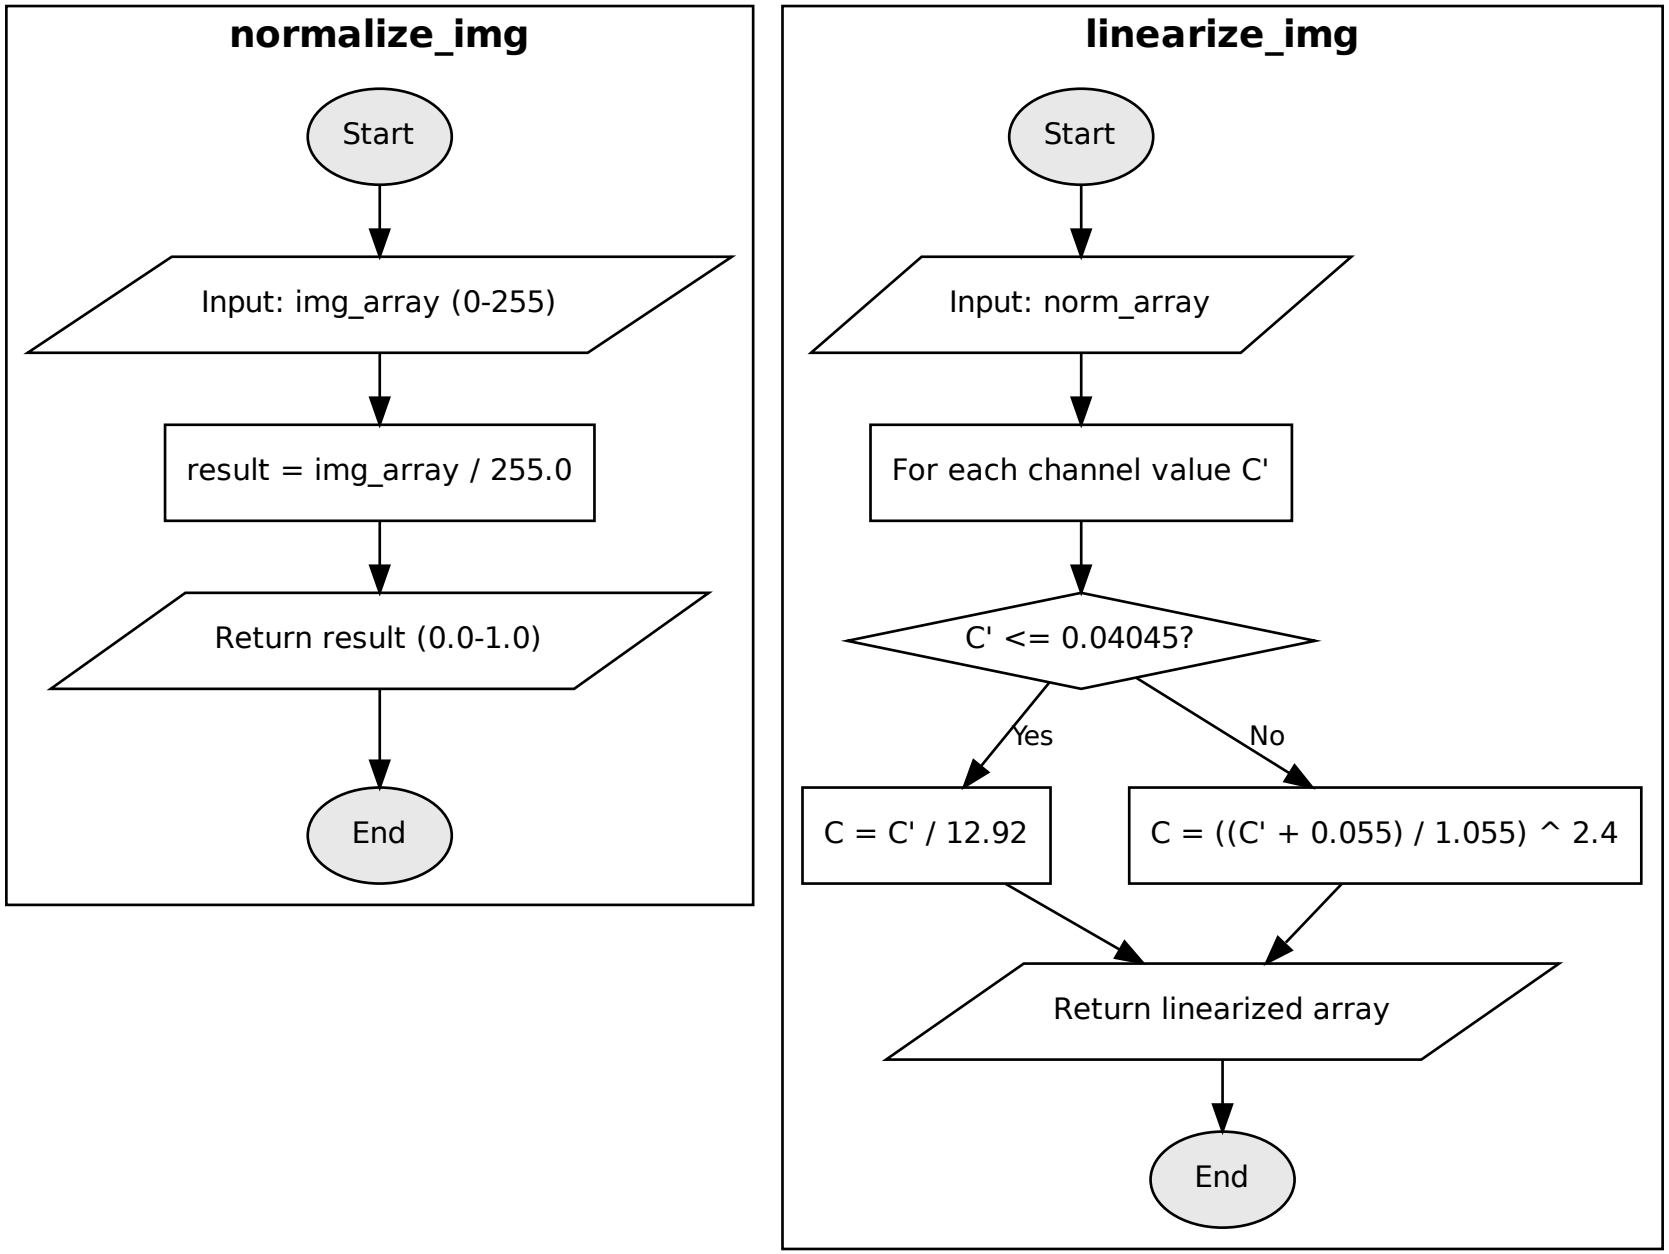

convert_to_hsv(rgb_image)

load_img(filename)

normalize_img(img_array) and linearize_img(norm_array)

resize_image(original_image_array, new_size) and pad_image(resized_img_array, target_size)
